

Corel Draw X3

CorelDRAW 1.x and 2.x runs under Windows 2.x and 3.0. CorelDRAW 3.0 came into its own with Microsoft's release of Windows 3.1. The inclusion of TrueType in Windows 3.1 transformed CorelDRAW into a serious illustration program capable of using system-installed outline fonts without requiring third party software such as Adobe Type Manager and also was the first all-in-one Graphics Suite, which combined a vector graphics software with a photo editing program (PhotoPaint), a font manager and several other pieces of software included with each version.
